

Professional Summary

Motivated Computer Science Engineering student specializing in full-stack web development, with hands-on experience building scalable, secure applications using React.js, Node.js, and modern JavaScript frameworks. Proficient in Python, JavaScript, and SQL, with a strong foundation in Linux and database-driven system design. Brings a security-conscious approach to development through practical experience in vulnerability assessment and secure coding practices. Committed to writing clean, efficient code that performs reliably under real-world conditions.

Skills

Languages: Python, JavaScript, SQL

Web Development: React.js, Node.js, Express.js, MongoDB, HTML, CSS, REST APIs

Cybersecurity: VAPT, Malware Analysis, OWASP Top 10, Web Security, Network Security, TCP/IP, HTTP/HTTPS

Tools: Kali Linux, Ubuntu, Burp Suite, Nmap, Wireshark, Metasploit, Nessus, Git, GitHub, Postman, VirtualBox

Core Subjects: OOP, Operating Systems, Computer Networks, DBMS

Projects

ReconX Scanner

Python, Flask, Nmap, OWASP ZAP

- Engineered a modular reconnaissance and vulnerability assessment platform that unifies port scanning, subdomain enumeration, directory brute-forcing, and XSS detection into a single automates web interface, tools during an assessment.
- Implemented multithreaded Nmap scanning with automated target enumeration and concurrent job scheduling, allowing multiple security assessments to run in parallel and significantly reducing overall reconnaissance turnaround time.
- Designed and built an automated PDF reporting engine compiles vulnerability severity ratings, affected services, and remediation recommendations into a single cutting report preparation from a manual multi-hour task down to seconds.

AI Smart Interview System

React.js, Node.js, Express.js, MongoDB

- Built a full-stack AI-powered interview platform that combines intelligent resume parsing, role-based interview question generation, and auto candidate evaluation into a single seamless hiring workflow for recruiters and hiring managers.
- Integrated real-time speech recognition with AI-driven response analysis to evaluate candidate communication skills, confidence, and overall interview performance instantly, without requiring a human interviewer to be present.
- Developed a recruiter-facing analytics dashboard featuring interview scoring breakdowns, candidate progress visualization, and detailed performance reports, giving hiring teams a single data-driven view for faster and more consistent hiring decisions.

Ransomware Detection using Malware Analysis (Ongoing)

Python, Scikit-learn, PEfile

- Developing a machine learning-based ransomware detection framework that leverages static malware analysis to identify malicious Windows executables before they ever execute, avoiding the performance overhead of runtime sandboxing.
- Built an feature extraction pipeline that analyzes PE headers, imported APIs, section entropy, embedded strings, and executable metadata to generate rich, security features suitable for machine learning classification.
- Engineered ensemble classifier combining Random Forest and XGBoost, raising ransomware detection F1 score from 0.82 to 0.91, cutting false positives by 45 samples per week.

Achievements

- Top 1% Global Ranking** on TryHackMe, demonstrating advanced practical skills in penetration testing, web security, Active Directory, malware analysis, and SOC operations.
- Global Rank 786 in picoCTF 2026**, competing against thousands of participants worldwide in cybersecurity challenges.
- Achieved **Rank 41** in the **Love at First Breach CTF** hosted by TryHackMe, offensive security and red teaming .
- Completed **90+ TryHackMe rooms** across Red Teaming, Blue Teaming, Digital Forensics, Malware Analysis, Active Directory, and Web Application Security.

Certifications

- Junior Penetration Tester – TryHackMe
- Web Application Pentesting – TryHackMe
- Cybersecurity Analyst Virtual Experience Program – Tata (Forage)
- Certified Social Engineering Defense Practitioner (CSEDP)
- Certified Cyber Hygiene Practitioner – ISEA, Government of India

Coding Profiles

- TryHackMe:** Top 1% Global Ranking with hands-on experience in Penetration Testing, SOC Operations, Active Directory, Malware Analysis, and Web Security.
- GitHub:** Published multiple cybersecurity and full-stack development projects with comprehensive documentation and version control.

Education

Bachelor of Technology in Computer Science Engineering (Cybersecurity)

2023 – 2027

Chitkara University, Punjab

CGPA: 8.15/10
